Website: spiralpixel.com

Twitter: twitter.com/jo_phillips

Facebook: facebook.com/joswebfan

Thank You

Thank you for purchasing my theme. If you have any questions that are beyond the scope of this help file, please feel free to email via my profile page.

01: Html Sections

This theme uses Twitter Bootstrap framework, it will help if you are familiar with its workings. You can read more about it here: <http://twitter.github.com/bootstrap/>

Grid System: The default Bootstrap grid system utilizes 12 columns, making for a 940px wide container without responsive features enabled. With the responsive CSS file added, the grid adapts to be 724px and 1170px wide depending on your viewport. Below 767px viewports, the columns become fluid and stack vertically.

<http://twitter.github.com/bootstrap/scaffolding.html#gridSystem>

Navigation

The menu navigation is controlled using ids e.g

Menu: `Work`

Section: `<div class="page-work" id="work">`

You can also scroll to any section within your site by adding the class "scroll" to any internal link.

Intro Section

Flexslider: - <http://www.woothemes.com/flexslider/>

Add your images to > img/gallery, ensure that all of your images are the same size.

The lead text to the right of the slider is hidden on iPads to allow for correct alignment with the slides. You can alter this setting in the Media Queries settings at the bottom of your style.css file. If you want the scroll button to show when viewing with an iPad remove "hidden-tablet" from the button's code.

Flexslider is also used for the scrolling thumbnail section above the contact section.

Icons: There are 140+ icons to choose from, you can see all of them and their codes on the attached file : icons.html

<http://fortawesome.github.com/Font-Awesome/>

How to use: All icons require an <i> tag with a unique class, prefixed with icon. To use, place the following code:

```
<i class="icon-search"></i>
```

Image borders: You can choose from two image styles: Classes "img-polaroid" gives you a border and drop shadow and "img-rounded" gives you rounded corners.

Gallery

The gallery uses a responsive image gallery with a thumbnail carousel, Elastislide. It has a view switch that allows viewing with the thumbnail carousel or without. It also allows keyboard navigation. jQuery Touchwipe Plugin makes it possible to navigate the images by "wiping" on the iPhone and iPad.

Add your thumgs to img > gallery > thumbs and your large pics to img > gallery

Fancy Box

You can add a lightbox effect to any image or video using Fancybox. To add a lightbox effect:

```
<a class="fancybox-effects" href="img/gallery/img1-full.jpg" title="">
</a>
```

Replace img1-full.jpg with your own image and give each a new name for every large picture that you add. e.g
img2-full.jpg, img3-full.jpg....

Javascript

I have included some examples > elements.html to give you easy access to the code.

Here are some that have been included in your theme.

Tabs: <http://twitter.github.com/bootstrap/javascript.html#tabs>

You can activate a tab or pill navigation without writing any JavaScript by simply specifying data-toggle="tab" or data-toggle="pill" on an element. Adding the nav and nav-tabs classes to the tab ul will apply the Bootstrap tab styling.

```
<ul class="nav nav-tabs">
  <li>Home
  <li>Profile
  <li>Messages
</ul>

<div class="tab-content">
<div class="tab-pane active" id="home">...</div>
<div class="tab-pane" id="profile">...</div>
<div class="tab-pane" id="messages">...</div>
```

Accordian:

```
<div class="accordion" id="accordion2">
<div class="accordion-group">
<div class="accordion-heading">
Collapsible Group Item #1</a></div>
<div id="collapseOne" class="accordion-body collapse in">
<div class="accordion-inner">
Anim pariatur cliche...
</div>
</div>
</div>
</div>
```

Tooltips:

```
<a href="#" rel="tooltip" title="first tooltip">hover over me</a>
```

Buttons:

```
<a class="btn btn-small btn-inverse" href="#">Read More</a>
```

Carousel:

```
<div id="myCarousel" class="carousel slide">
<!-- Carousel items -->
```

```
<div class="carousel-inner">
<div class="active item">...</div>
<div class="item">...</div>
<div class="item">...</div>
</div>

<!-- Carousel nav -->

<a class="carousel-control left" href="#myCarousel" data-slide="prev"></a>
<a class="carousel-control right" href="#myCarousel" data-slide="next"></a>
</div>
```

Contact Section:

Twitter:

Add your username into the code in your index.html file.

1: Scroll down until you see: -- ADD YOUR TWITTER ID HERE - REPLACE JO PHILLIPS --

Simply replace 'jo_phillips' with your twitter id. If you like you can also add more tweets by changing the count.

Contact Form:

To get the updates form to forward to your email address.

a) In a text editor of your choice, open send.php

At the top of the page, you will see the following code:

```
$email_to = "ADD YOUR EMAIL ADDRESS HERE";
```

b) Simply add your email address within the quote marks where it says - Add Your Email Address

c) You may also want to change the thank you message. You can do this by opening style > js > jquery.custom.js

Find the commented section - 'Form Validation Script', located at the top of the page.

You will see: <p class="success">Thank you!....</p>

Change this to your thank you message.

Twitter Tweets:

Add your username into the code in your index.html file.

1: Scroll down until you see: -- ADD YOUR TWITTER ID HERE - REPLACE JO PHILLIPS --

Simply replace 'jo_phillips' with your twitter id. If you like you can also add more tweets by changing the count.

* You won't be able to see your tweets if you are working offline as the code is hotlinked directly to Google.

Google Map:

The map uses Google maps v3 plugin for jQuery and jQuery Mobile. To add your location scroll down to the bottom of the index.html file and add your longitude and latitude. You can obtain these from either the google map embed code or read more here: <http://support.google.com/maps/bin/answer.py?hl=en&answer=18539>

Misc

Google font replacement has been used, Volkhorn for the headings and Lato for the body text. You can change these quite easily by visiting: <http://www.google.com/webfonts>. Select your chosen font and add the code to the head section of the index.html file, and then make the font changes to your css.

Colours

Section colours and patterns can easily be changed in your style.css file.

Section colours: style.css > 03. Sections

Font colours: style.css > 02. Typography

```
/*Font Colours */  
.dark { color:#333; }  
.grey { color: #bbb; }  
.dark-grey { color: #777; }  
.red { color: #d8450b; }
```

Lastly, don't forget to delete, icons.html, elements.html and also docs.css before going live!

Please note: Due to illegal downloads, questions will not be answered if any theme related questions are sent to spiralpixel.com. Please use my ThemeForest contact form, thank you! - <http://themeforest.net/user/josweb>

Once again, thank you so much for purchasing this theme. As I said at the beginning, I'd be glad to help you if you have any questions relating to this theme. No guarantees, but I'll do my best to assist. If you have a more general question relating to the themes on ThemeForest, you might consider visiting the forums and asking your question in the "Item Discussion" section.

Jo Phillips
